

JavaScript Advance

PAMODA ANGELO KONARA
AUGUST 2024

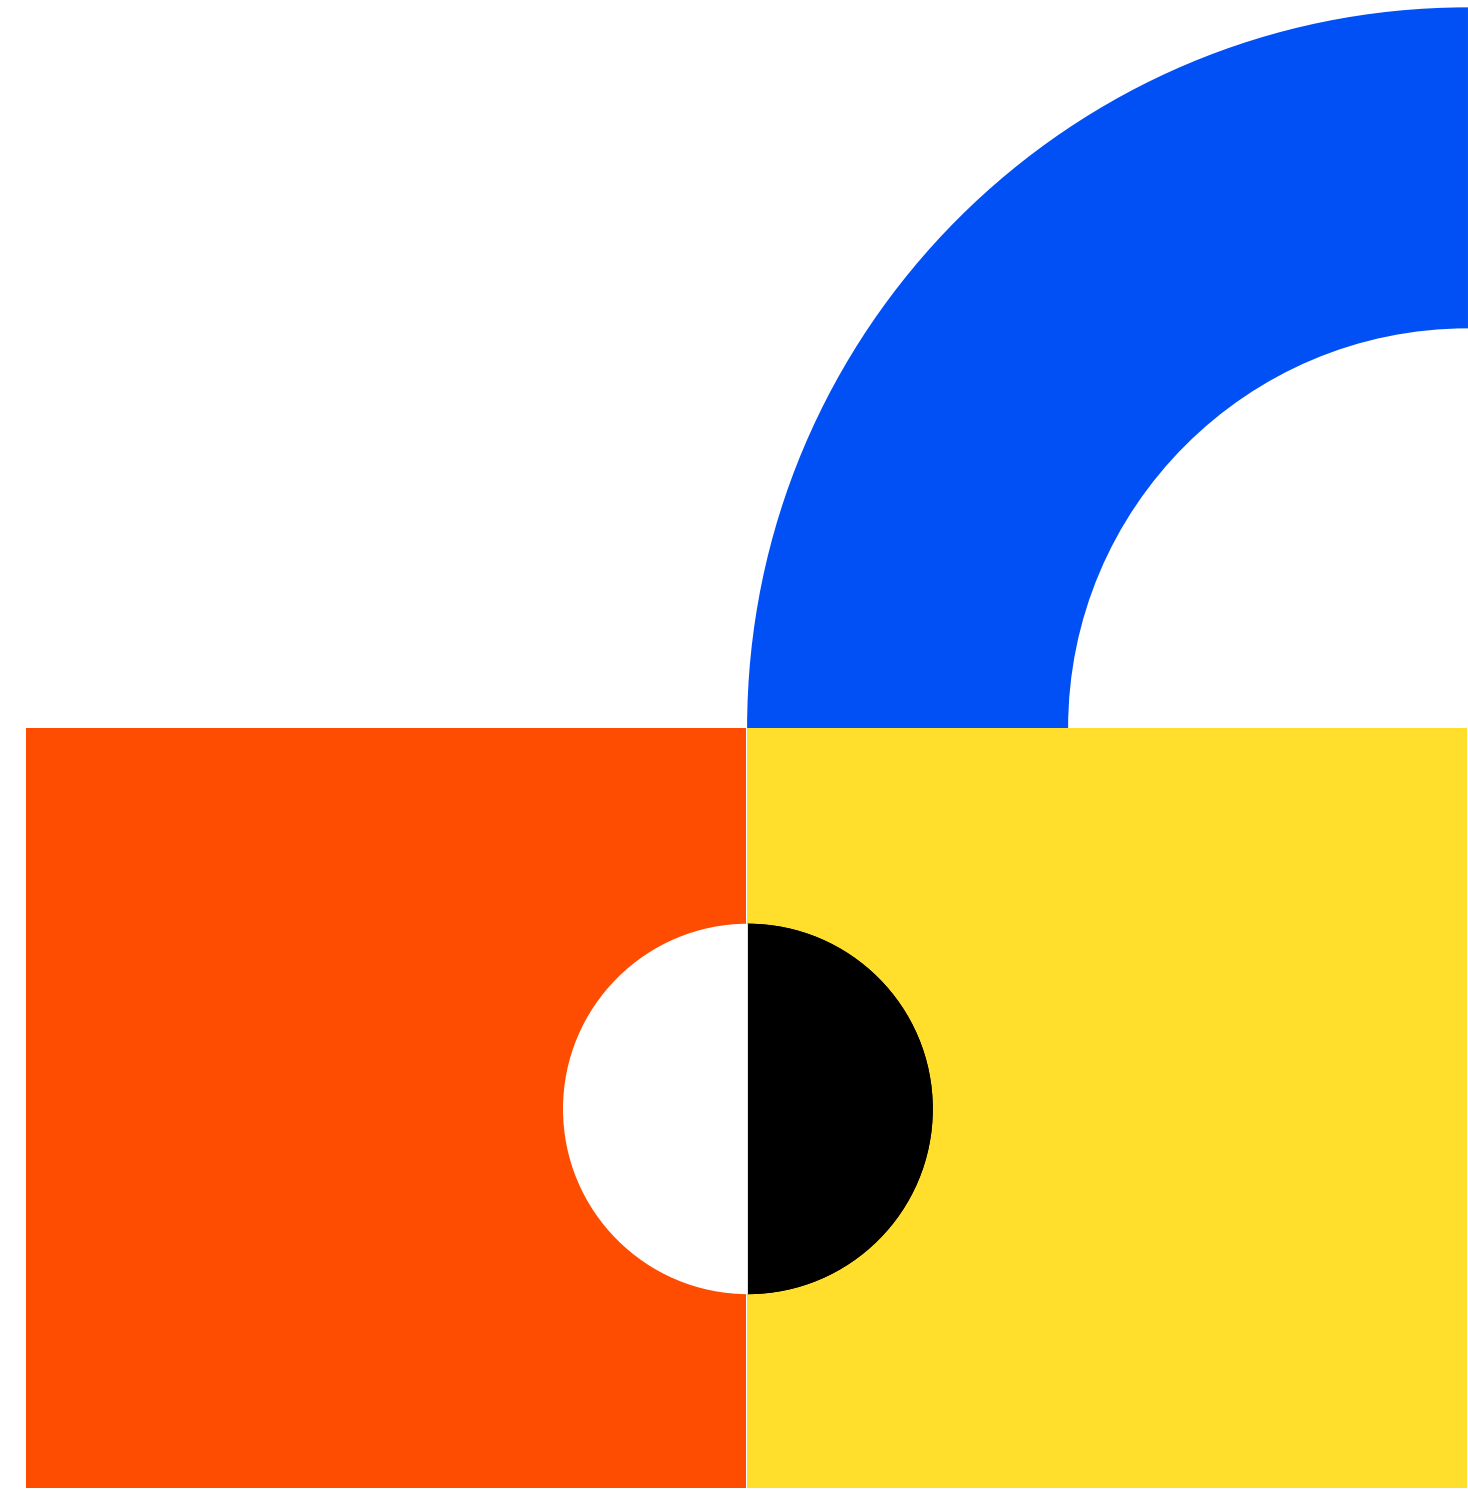

First Review

As soon as the user enter the site, the website will show the 10 latest news and with a button the user can load 10 more and so on.

Using DOM manipulation with JavaScript by connecting all the id from html to JavaScript. Fetching new stories it shows the name that is the link that bring to the site, the date and hour when it has been published.

With the help of Css I've changed color and font style by changing font and coloring everything in shades of blue.

Second Review

In the second review I made the site with the help of webpack, that help me to distribute wherever I want.

And I changed also the JavaScript File to be more readable and maintainable.

Finally I added the file .gitignore to remove all unnecessary files.
